DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-26, drawn to the scaling of computer power supplies and computer power control, classified in class 713, subclass 300.
- II. Claims 27-30, drawn to future energy consumption demand statistics, classified in class 700, subclass 291.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility, such as the management of computer power supplies, in relation to computer user consumption and history. This constitutes scaling computer power supplies and deals mainly in computer power conservation and optimization. Invention II implements a forecasting of energy demand requirements, and determining whether resource changes are required to meet the forecasted future demand, taking into account global variables. As such, this constitutes energy demand forecasting and statistics, and may be implemented separately.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
